

28# - POS "Communiqué" OPEN PRICE

Managers/Bar Supervisor/Function coordinators ONLY please.

Shortly we will be launching the Privileged cards (formerly known as the PMC Chits) I must ask that you all double check your specialty items to ensure you are not using the function "OPEN PRICE".

Every item needs to have its own price - you can no longer use the OPEN PRICE and change the price at the POS system. I am not sure who or how many messes have been creating items like this. (Blender drinks, cocktails) - please ensure the OPEN PRICE is uncheck for all items. Each item needs to be set up per item with all recipes extra and price.

Point of sales

Items setup

Find your item

Click Modify

Item – function – uncheck OPEN PRICE

Configuration – and enter the correct price (in all modes except cost price mode 3)- as it will calculate the correct cost.

If you created these items as the alcohol was different then you will need to create the items using "Modifiers". Then when the item is selected a list of alcohol would appear and you would select the one the customer wants (and the price will be action if it cost more).

OR

Create each item with the alcohol in the name of the item (this way you would be creating lots of items)

Example : Straw Daiquiri (rum), Straw Dailquiri (vodka),

Remember our inventory is now depleted per item sold, it is extremely important to ensure we create items correctly with the correct price.

Please confirm to me by reply to this email that you have ensure this has been done.
